3.6 Alarm Volume Setting:

① Press the "VOL" button to adjust volume of the alarm.

② 5 levels to choose from: V1-V5

3.7 Snooze Setting:

①When the alarm goes off, press any button once. The corresponding alarm indicator light will flash, giving you an extra 9 minutes of snooze time.
Notice: The snooze function will automatically shut off after 4 consecutive uses.

②To turn off the snooze feature, simply press any button on the back twice. This will stop the flashing of the alarm indicator light. Alarm will go off on the next day.

3.8 Reset Setting:

① RST — Use a needle or little stick to push the "**RESET**" hole to reset all settings.

② CR 2032 — CR2032 is only used for memorizing setting, it will still keep the time even if the clock isn't plugged in.

4. Trouble Shooting:

1) Missing power cord, or instructions, please contact us on Amazon or by email for a new replacement.

2) To exit setting mode, stop pressing for 5 secs and it will return to time display automatically.

3) If you find your alarm clock cannot be restored to the current time after a power outage, it may be because the CR2032 battery on the back of the clock is depleted. Please try replacing the battery.
Notice: The CR2032 is only used to store the alarm clock's settings and cannot be used to power the clock separately. This means that the screen will not light up if the alarm clock is used without being plugged in.
